# INDEX

# EGGPLANT

# EGGPLANT

## Classic

### GORDITA F1

- Glossy black fruits, 350-400 g weight.
- Vigorous and very productive plant.
- Mid cycle.
- Consistent pulp, slow seed development.
- Green calyx with few spines.
- Good shelf life.
- HR\*/IR\*: ToMV.

## Classic

### PERFECTION F1

- Classic hybrid, tear drop shape.
- Glossy black fruits, 350-400 g weight.
- Mid-early cycle.
- Planta vigorosa y muy productiva.
- Cáliz verde con pocas espinas.
- 15 días de conservación poscosecha.
- HR\*/IR\*: ToMV.

## Italian

### BELLA ROMA F1

- Mid-vigor plant with good cover, high yielder.
- Light violet color.
- Globose fruits with high specific weight (350-400 g).
- White, consistent pulp with few seeds.
- Suitable for greenhouse and open field.
- HR\*/IR\*: ToMV.

# EGGPLANT

Long

## CRAWELL F1

- Variety for early spring sowing.
- Suitable for late spring transplants.
- Cylindrical fruits measuring 22-25 cm and weighing 250-300 g, dark purple and shiny, with excellent flavor and aroma.
- Excellent transportability, long shelf life.
- Very early plant with a high ability for adaptation to cold and heat, excellent production and fruit setting.
- High tolerance to Fusarium.

Long

## NITE LADY F1

- Elongated-cylindrical fruits of shiny black color and green calyx with very few spines.
- Weight: 250-300 g.
- Mid-early cycle.
- Good productivity, constant over time.
- Very good for greenhouse, good behavior at high temperatures.
- HR\*/IR\*: ToMV.

Striped

## UG 7211 F1

- Striped Neon type, very attractive color.
- Oval-elongated fruits, 100-150 g weight.
- Green calyx with very few spines.
- Fleshy and sweet white pulp.
- Slow seed development.
- Cycle: 75-85 days.
- Suitable for greenhouse and open field.
- Ideal for professional cultivation.

# BRASSICA

A photograph of a large field of young brassica plants, likely bok choy or a similar variety, growing in neat rows. The plants are vibrant green with large, rounded leaves and prominent white veins. The soil between the rows is a dark brown color. The perspective is from a slightly elevated angle, looking down the length of the rows.

# BRASSICA

## ALMORA F1

- For December to February harvesting.
- High uniformity and performance even under changing growing conditions.
- Vigorous, medium-sized plant, with a compact, domed-shaped head. Strong against Mildew.
- Small grains.
- Long shelf life.
- HR\*: Pp (*Peronospora parasitica*), Oidium.

Broccoli

## SAVOSTAR F1

- Savoy cabbage, highly appreciated for its organoleptic characteristics.
- Mid-early cycle: 70-80 days after transplant.
- Very regular, tightly packed, round heads with semi-bulbous leaves.
- Good crop adaptability in both fall and spring cycles.
- HR\*/IR\*: Foc.

Cabbage

## RED HEAD F1

- Deep red head, rounded shape.
- Weight: 1.5-2 kg average.
- Mid-early cycle: 70-75 days after transplant.
- Sweet and juicy, suitable for both fresh consumption and processing.
- Good resistance to splitting.
- Good adaptability in all climatic areas.
- Tolerant to yellow wilt.
- HR\*/IR\*: Foc.

Red cabbage

## TALAMOND F1

- Round and compact heads.
- Nice light green leaves.
- Mid-early cycle: 60-65 days after transplant.
- Weight: 1.5-2 kg average.
- Sweet and juicy, good adaptability in all climatic areas.
- Tolerant to yellow wilt.
- HR\*/IR\*: Foc.

Head cabbage

# BRASSICA

## GREEN CUP F1

- High-yielder hybrid with the characteristic calyx shape.
- Early cycle.
- Upright plant with excellent bolting tolerance.
- Firm, oval and deep green leaves, with green stems.
- Average weight: 150-450 g.
- Long shelf life.
- Suitable for fesh market and processing.
- Sowings: fall, winter, spring.
- Planting ratio: 200/320,000 plants per hectare.

Pak choi

# SQUASH

A wooden crate filled with various types of squash. The crate contains several yellow squash, some with their orange flowers still attached. There are also several green squash, some with dark green stripes, and two white squash. The background shows green foliage, suggesting a garden or farm setting.

# SQUASH

## AEOLOS F1 (UG 6152)

- Bright yellow cylindrical fruits, very uniform throughout the cycle.
- Vigorous and rustic plant, upright habit.
- Length: 20-22 cm.
- Excellent shelf life.
- IR\*/: Px/PRSV/WMV/ZYMV.

Yellow

## PATTYMAT F1

- Round-flat squash, 110-120 g weight.
- Light green to bright yellow color when fully ripe.
- Very productive plant.
- Mid-early cycle.
- Sweet flesh, ideal for stuffing and slicing.
- HR\*/IR\*: Px.

Yellow

## ROUND BEAUTY F1

- "Ronde de Nice" type.
- Vigorous plant with good PM tolerance.
- Very uniform round fruits (120-130 g), light green color.
- Sweet and crunchy pulp, ideal for stuffing.
- HR\*/IR\*: Px.

Round

## UG 8148 F1 (MOULATY)

- Cylindrical and uniform fruits of 18-20 cm.
- Vigorous plant.
- Resistant skin that withstands the knocks and tears of harvesting works.
- Good adaptability to different areas.
- HR\*/IR\*: Px, PRSV, WMV, ZYMV.

Light green

# SQUASH

## DIAMANT F1

- Cylindrical fruits, 18-21 cm length.
- Open habit, vigorous plant. The fruits are easily harvested without damaging the crop.
- Earliness: 50 days.
- Suitable for greenhouse and open field.
- Good cold resistance for fall and spring sowings.

Mid green

## AMBASSADOR F1

- Small cylindrical fruits (14-16 cm) with shiny skin.
- Plant with short internodes and good setting, both in open field and greenhouse. Its open habit makes harvest easy.
- High productivity and earliness in all productive seasons.

Dark green

## BLACK STAR F1

- Multivirus variety for fresh market and processing, 20-22 cm length.
- Small, dry floral scar.
- Healthy, vigorous, highly productive and self-sufficient plant, which favors easy and prolonged harvesting.
- HR\*/IR\*: Px, CMV, WMV, ZYMV.

Dark green

## JAGO F1

- Cylindrical fruits of 20-22 cm, high quality for uniformity and brightness.
- Very productive and self-sufficient plant, with open head and thin petioles.
- Excellent quality and shelf life thanks to its thin peduncle.
- IR\*: PRSV, WMV, ZYMV, Px.

Dark green

# PUMPKIN

## FRESH MARKET

# FRESH MARKET

## CROWN PRINCE F1

- High yielding variety with strong plant.
  - Blocky-round, slightly ribbed fruits, medium-small seed cavity.
  - Weight: 3.5-4 kg.
  - Grey, smooth and thin rind resistant to sunburns, easy to peel.
  - Very attractive orange flesh.
  - Suitable for processing, fresh and ready to eat market.
  - Medium storability.
- 

## DULCIMAKS F1

- New generation variety, Kabocha type.
  - Excellent yielding, covering and vigorous plant.
  - Very homogeneous fruits, highly cracking tolerant.
  - Weight: 2.3-2.8 kg.
  - Suitable for all crop cycles.
  - Very sweet and firm orange flesh.
  - Long storability.
- 

## DULCISTORE F1

- New genetic variety, Kabocha type.
  - Upright and vigorous plant with good tolerance to powdery mildew.
  - Round-flat fruits, heavy and uniform, with dark green color. Excellent for all crop cycles.
  - Weight: 1.8-2 kg.
  - Exceptional storability, one of the longest in its category.
-

# FRESH MARKET

## KG 84 F1

- Semi-bush variety with upright plant, most fruits set at the base.
- Vigorous, covering and very productive plant.
- Uniform fruits, dark green color.
- Weight: 2-2.5 kg.
- Very sweet and firm flesh.
- Suitable for different crop cycles, allows high planting density.
- Mid-long storability.

## LIZZARD F1

- Butternut type with tigered skin turning to cream color when fully ripe.
- Weight: 1,2-1,5 kg.
- Very small seed cavity
- Firm flesh, deep yellow color.
- Excellent sugar content.
- Long storability.
- Also suitable for processing.

## MOSCATA DI PROVENZA

- High yielding variety, with rustic plant easy to grow.
- Heavy and very ribbed fruits.
- Weight: 7-9 kg.
- Thick, smooth, tan rind with resistance to sunburns.
- Firm flesh, red-orange flesh.
- Excellent storability with reduced weight loss.
- Also suitable for processing and ready to eat market.

# FRESH MARKET

## REDDY F1

- Early variety, high yielder.
- Uniform fruits of 1.5-2 kg, attractive red-orange color. Resistant to sunburn damages.
- Bright orange and very firm flesh, sweet taste with hazelnut flavor.
- Long storability.
- Suitable for high quality fresh market.

## ROTORUA F1

- Nice variety with round fruits, slightly pear-shaped.
- Good yield and vigor.
- Tasty flesh fruits, 1-1.5 kg weight.
- Very sweet deep orange flesh.
- Crop cycle: 90 to 100 days.
- Suitable for domestic consumption.

## UG A 178 F1

- Multivirus hybrid, Japanese type.
- Mid-early plant, very rustic and productive, with high tolerance to powdery mildew.
- Round-flat fruits, 1.5-2 kg weight.
- Dark green skin with lighter green spots.
- Deep yellow-orange flesh with excellent organoleptic features.

## UG 205 F1

- Multivirus Butternut with high tolerance to powdery mildew, also suitable for processing.
- Mid cycle plant, open habit, good yielder.
- Fruits with smooth skin, 1-2 kg weight, with very small seminal cavity.
- Yellow-orange flesh, very sweet, with good aroma and density.

# FRESH MARKET

## VANITY F1

- Very productive grey type.
- Orange and very firm flesh, sweet taste with chestnut flavor that increases in few weeks after harvesting.
- Higher Brix than average.
- 2-2.8 kg fruits, resistant to cracking.
- Suitable for a high quality market and restaurants.
- Very long storability.

# PUMPKIN HALLOWEEN

### CHOCOLATE F1

- Beautiful hazelnut-colored skin, slightly wrinkled and grooved.
- Vining plant with
- intermediate resistance to powdery mildew.
- Round-oval fruits with strong handles.
- Weight: 4.5-6 kg.
- ideal for decoration.

### LEMON F1

- Edible variety.
- Lemon yellow rind, slightly wrinkled and grooved.
- Vining and high yielding plant with good resistance to powdery mildew.
- Globe-shaped, uniform fruits with strong handles.
- Weight: 4-6 kg.

### EROS F1

- Fast-maturing pumpkin, suitable for late plantings.
- Blocky-round fruits, heavily ribbed, with strong handles.
- Big size type (7-9 kg).
- Excellent storability.

### RACER F1

- Edible variety, leader in its category.
- High yielding , vigorous plant.
- Very uniform round-flat fruits with strong handles, 5-7 kg weight.
- Deep orange, slightly grooved rind, easy to carve.
- Ideal for decoration.

### SCARFACE F1

- Big-sized warty pumpkin (7-9 kg) with a nice upright shape.
- Sturdy walls that are not easily damaged.
- Strong handle for easy handling.
- Dark orange skin, slightly ribbed, with hardened warts.
- Ideal for decoration.

### GRIZZLY BEAR F1

- Exceptionally warty.
- Color canela muy singular.
- Very unique cinnamon color.
- Outstanding production with reliable setting.
- Uniform and long-lasting fruits, 2.8-4.5 kg weight.

### SPELL F1

- Semi-bush plant with intermediate resistance to powdery mildew.
- Oval and very uniform fruits, with strong handles.
- Weight: 4.5-6.5 kg.
- Light orange, smooth and slightly grooved rind. Suitable for painting.

### SNOWBALL F1

- Edible variety with bright, smooth and slightly grooved rind.
- Vigorous and high yielding plant.
- Uniform fruits with nice round shape.
- Weight: 0.8-1.2 kg,
- The white color lasts a long time, even more if stored in the dark.

### SUNLIGHT F1

- Very productive and uniform variety.
- Impressive yellow color that contrasts with the dark green stem.
- Fruits weighing 2-4 kg that darken from yellow to gold with sun exposure.
- Ideal for decorative mixes.

# CARNIVAL MIX

- Assortment of decorative pumpkins from 0.3 to 1 kg

# ONION

# ONION

## TOP STAR F1

- Excellent variety that stands out for its earliness and bulb quality.
- Globose, solid and compact bulbs, white at first and straw yellow when fully ripe.
- Double use as fresh onion and dried onion.
- Good behavior against early bolting.
- Recommended sowing dates: from mid-August to mid-late September in areas with good temperatures.
- Dry harvest: from mid April to early May according to growing areas.
- Green harvest: starting February.
- Tolerant to root rot.

Short day

## RED MAGIC F1

- For summer-fall sowing and spring harvesting.
- Large size round bulbs with attractive deep red color.
- Resistant to early bolting.
- Medium pungency, ideal for fresh consumption.
- Tolerant to Pink Root.

Short day

## TROPEA LUNGA

- Standard variety.
- Used both as a bulb and as a spring onion.
- For spring and fall sowings.
- Tender, sweet, elliptical-shaped bulbs, pinkish-white color inside.
- Violet-red tunics.
- Reduced neck.

Intermediate day

## TROPEA TONDA

- Standard variety.
- Round bulbs with violet-red tunics.
- For spring and fall sowings.
- Selection of the famous Calabrian ecotype, highly appreciated for its organoleptic features.
- Excellent for fresh consumption.

Intermediate day

# ONION

## GULNAR F1

- Adapted for summer-fall sowing, but also for spring sowing.
- Round-globose bulbs, optimal size and uniformity.
- Bright deep red tunics.
- High yielder, resistant to early bolting.
- Tolerant to Pink Root.

Intermediate day

## RED ROCK F1

- Excellent yielder for spring sowings.
- Mid-large sized globose bulbs with very tight neck.
- Bright deep red tunics.
- Resistant to early bolting.
- The consistency and texture of the bulbs allow for good resistance to handling and optimal storability.
- Tolerant to Pink Root.

Long day

## RAMONA F1

- Rustic variety with a pungent flavor, good response to stress.
- Late cycle.
- Medium-sized bulbs, dark bronze in color and globose in shape, with thick, dense tunics.
- Suitable for mechanical harvest.
- Storability up to 8-9 months.
- Tolerant to Pink Root and Fusarium.

Long day

# MELON

# MELON

## Ananas

### ANAMAX F1

- Very large classic Ananas, 4 kg.
- Extra-early variety, perfectly oval, with pale creamy flesh.
- Very strong and productive plant.
- Very sweet and tasty flesh (12° Brix).
- Continental adaptation.
- Suitable for Middle Eastern countries.
- HR\*/IR\*: Fom 0-2, PM.

## Canary

### OROGRANDE F1

- Early oval yellow variety, excellent yielder.
- Golden yellow skin, slightly wrinkled.
- Crunchy and firm flesh, small cavity.
- Average weight: 2-2.5 kg.
- Brix: 14-15°.
- Delicious flavor.
- HR\*/IR\*: Fom 0-2, PM.

## Charentais

### CHARMIEUX F1

- Netted Charentais type, ESL (Extended Shelf Life).
- Vigorous and healthy plant, excellent yielder.
- Very uniform fruits. Average weight: 1-1.3 kg.
- Consistent flesh with a very intense bright orange color. High sugar content (14-15° Brix).
- Good resistance to overripening.
- HR\*/IR\*: Fom 0-2, PM.

# MELON

## UG 1314 F1

- Very attractive appearance, 1 kg weight fruits.
- White flesh of excellent quality, very sweet (16-17° Brix) and crunchy.
- Mid-early cycle. Productive plant, with good foliar coverage and high setting ability.
- Good storability.
- HR\*/IR\*: Fom 0-2, PM.

Dino

## GALANET F1

- LSL (*Long Shelf Life*) variety.
- Perfectly round and uniform fruits, 1.1-1.5 kg weight, nice netting. Very reduced placental cavity.
- Pale green flesh, very sweet, crunchy and aromatic, 14° Brix.
- HR\*/IR\*: Fom 0-2, PM.

Galia

## TUSCANY F1

- Round fruits, 1.3-1.6 kg weight, with good netting and well-defined meridians.
- Vigorous, strong and productive plant, good tolerance to powdery mildew.
- Salmon consistent flesh, crunchy and firm. Good aroma. 13-15° Brix.
- Extended shelf life.
- HR\*/IR\*: Fom 0-2, PM.

Italian

## SAPOMIEL F1

- Elongated fruits (3-4 kg weight), with the typical sugar cracks when fully ripe.
- Very sweet white flesh (13-14° Brix).
- Classic aroma.
- Good storability.
- Vigorous plant with good foliar coverage, mid-early cycle.
- HR\*/IR\*: Fom 0-2, PM.

Piel de Sapo

# OKRA

# OKRA

## Indian

### NEW SHANKAR F1

- Fruits are 13-16 cm long, with a pentagonal section and slow fiber development. Medium-dark green color with smooth walls.
- Mid-early cycle.
- Plant with short internodes that begins to produce from below.
- Tolerant to OYVMV.

## Indian

### UG 2306 F1

- Perfect fruits of medium-dark green color and pentagonal section.
- Vigorous and healthy plant.
- Length: 12-15 cm.
- Tolerant to Okra Yellow Vein Mosaic Virus (OYVMV).

## Indian

### CLEMSON SPINELESS

- Traditional standard okra.
- Fruits with pentagonal section.
- Pale-mid green color.
- Uniform fruits, 8-12 cm depending on the ripeness stage.
- Vigorous plant.
- Suitable for all climatic areas.

# CUCUMBER

A close-up photograph of a woven wicker basket filled with fresh, vibrant green cucumbers. The cucumbers are of various sizes and shapes, some long and slender, others shorter and more rounded. They are piled together, with some showing their characteristic bumpy skin and others appearing smoother. The basket is set against a rustic wooden background, and a piece of brown, fibrous material is visible in the upper right corner.

# CUCUMBER

## Beit Alpha

### HERITAGE F1

- Highly productive multivirus gynoecious hybrid.
  - Vigorous plant with good expression of female flowers.
  - Cylindrical fruits with slight ribbing, with no spines.
  - Mid green color, smooth skin.
  - Length: 16-18 cm.
  - Good heat tolerance.
  - Excellent for both protected and open field cultivation.
  - HR\*/IR\*: CYVV, CMV, ZYMV, PM, DM.
- 

## Spanish

### OKENDO F1

- Excellent coverage.
  - Mid-high vigor.
  - Early variety, 15-18 cm long.
  - Short internodes, 1/2 fruits per internode.
  - Dark green leaves and fruits.
  - Dense spine.
  - Highly yielder.
  - IR\*: PX, CVYV, CYDV.
- 

## Dutch

### KORONEL F1

- Mid-vigor plant with large, dark leaves, very productive. It begins to produce early, strong shoots with many generative laterals.
  - Open plant allowing light, which helps keep a good fruit color in early transplants.
  - Dark green fruits with smooth ribbing, 31-33 cm long.
  - No bottleneck during the whole crop. Good pistillary closing, uniform sizes, no spines.
  - HR\*: CVYV, PM, Ccu.
-

# CUCUMBER

## Dutch

### MAKIS F1

- Beautiful dark, very grooved fruits.
- Open plant.
- It begins to produce quickly.
- Maintains caliber in the aerial parts.
- Recommended for transplants from August 15 to September 15 and spring.
- HR\*/IR\*: CYSDV, Cca, CVIV, PM, Ccu, CGMMV.

## Pickling

### CALYPSO F1

- Highly productive and vigorous variety, ideal for canning.
- Uniform, mid-dark green fruits with white spines, 5-7 cm long.
- Compact, space-saving growth habit.
- Adapted to all growing areas.
- HR\*/IR\*: CMV, Co, Pcu, Px.

## Pickling

### EUROPICK F1

- Vigorous and very productive plant.
- Slightly spiny semi-long fruits, with excellent shelf life.
- Firm and crunchy flesh.
- Recommended for hot weather.
- Suitable for fresh market and processing.
- HR\*/IR\*: Multivirus PM.

# CUCUMBER

Slicer

## DASHER II F1

- Outstanding yielder.
- Straight fruits, uniform dark green color, small seed cavity.
- Vigorous plant with good coverage.
- Relative maturity: 56-60 days.
- Excellent quality, good resistance package.
- HR\*: Ccu.
- IR\*: CMV, Co, Psl, Px.

Slicer

## MONTEBELLO F1

- Gynoecious variety, 18-22 cm long.
- High expression of female flowers provides the variety with a high productive potential.
- Vigorous plant, very leafy and with good coverage.
- Dark green, cylindrical fruits with slight spines.
- Small seed cavity with slow seed development.
- IR\*: Px, Ccu, CVYV, PRSV, CMV.

Slicer

## NABILA F1

- Dark green parthenocarpic variety, slightly spined.
- Excellent setting.
- No bitter taste.
- High yielder.
- Heat tolerant.
- Suitable for open field and protected cultivation.
- IR\*/HR\*: multivirus, PM.

# SWEET PEPPER

# SWEET PEPPER

Mini conical peppers suitable for open field and greenhouse.

- **SNACKING F1:** 3 x 6-7 cm, 40-50 g, L4. Green to orange color when fully ripe.
- **SNACKING BROWN F1:** 3 x 6-8 cm, 40-50 g, L1. Green to brown color when fully ripe.
- **SNACKING GREEN OLIVE F1:** 3,5 x 7-9 cm, 40-50 g, L1. Maintains green olive color.
- **SNACKING PURPLE F1:** 3 x 6-8 cm, 40-50 g, L1. Green to purple and then red color when fully ripe.
- **SNACKING RED F1:** 3,5 x 6-7 cm, 40-50 g, L4. Green to deep red color when fully ripe.
- **SNACKING YELLOW F1:** 3 x 6-7 cm, 40-50 g, L4. Green to yellow color when fully ripe.
- **SNACKING WHITE F1:** 3 x 6-7 cm, 30-40 g, L1. Attractive white to red color when fully ripe.

## SNACKINGS

### ARIOSTO F1

- Quadrilobed fruits of 11x11 cm and 250 g, smooth, with very thick walls.
- Very rustic and fertile plant with short internodes.
- Suitable for fresh market and processing due to the thickness of the pulp and its resistance to transport.
- HR\*/IR\*: TMV, Xcv, Pc, TSWV.

Blocky

### EFEK-TIVO F1

- Mid-late plantings.
- Strong plant with clearly defined stems.
- Setting ability with whitewashing.
- High quality fruits from the first setting.
- Excellent holding ability.
- High percentage of G caliber.
- Higher planting density.
- HR\*/IR\*: Tm 0-3 (L4), TSWV:0, Lt.

Blocky

### OROSTAR F1

- Quadrilobed fruits of 10 x 12 cm, very uniform, with thick walls and high specific weight.
- Dark green color to bright yellow when fully ripe.
- Compact, very strong and productive plant.
- Suitable for protected crop and open field.
- HR\*/IR\*: TMV, Xcv, TSWV.

Blocky

# SWEET PEPPER

## Corno

### ROSSANO F1

- Mid-early cycle.
- Very firm and long fruits (4-5 x 18-20 cm), with small, thick walls. Deep green color turning into a very attractive bright red.
- Very rustic plant, with good vigor and coverage, adapted to both protected and open field cultivation.
- HR\*/IR\*: TMV, TSWV.

## Corno

### TRUDY F1

- Mid-early cycle.
- Long fruits (20-23 cm), smooth and very consistent, bright green color with a good turn to red.
- Very rustic and vigorous plant, airy and easy to manage.
- For both green and red harvesting.
- Ideal for open field cultivation.
- HR\*/IR\*: TMV, TSWV.

## Corno

### YELLOWBAR F1

- Suitable for open field and protected cultivation.
- Large fruits (+25 cm), very regular and heavy thanks to the optimal thickness of the walls.
- Smooth skin, dark green to an attractive bright yellow color when fully ripe.
- Plant with a hanging habit and external fruiting, very rustic and productive.
- HR\*/IR\*: TMV, Xcv, TSWV.

# SWEET PEPPER

## GOLDEN EMPEROR F1

- Mid cycle.
- Mid-large uniform size, thick walls.
- Dark green to bright yellow when fully ripe.
- Very productive and covering plant.
- Suitable for both protected and open field cultivation.
- HR\*/IR\*: PVY, TMV.

Half-long

## RED EMPEROR F1

- Quadrilobed fruits, with thick walls, 15-18 long x 6-8 cm wide.
- Heavy and prolonged producer.
- Strong plant with very good coverage.
- Ideal for open field, but giving also good results in protected crop.
- HR\*/IR\*: PVY, TMV.

Half-long

## ENTENZA

- Traditional Galician variety, with a mild flavor and no capsaicin. It must be harvested when unripe.
- "Cow snout" shape (3 lobes), different from the square variety.
- Smooth fruits, 3.5-4.5 g weight, 3.5-5.5x1.5-2 cm.
- Buen cuaje con altas temperaturas.
- Suitable for open field.

Padron

## CALABRESE F1

- Sweet, juicy fruit with good ribbing. Excellent flesh thickness and specific weight.
- Very bright and attractive internal and external red color. Excellent for processing.
- Rustic plant with prolonged production,
- Suitable for open field and protected crop.
- HR\*/IR\*: TMV, TSWV.

Topepo

# ROOTSTOCK

# ROOTSTOCK

## Eggplant

### AK SEL. HUGO F1

- *Solanum torvum* selection.
- Vigorous vegetative and root development, allowing for improved absorption of nutrients even in winter and high productivity.
- Note: Seeds require light to germinate. Sow 25 days before the variety to be grafted. It is recommended to sow directly into the trays, fairly shallowly and covering them with a light layer of vermiculite.
- IR\*/TOL\*: Nematodes, Fusarium, Root rot (corky roots), Bacterial rot and Verticillium.

## Watermelon for watermelon

### AKPRIM F1

- Belonging to the *Citrullus* genus, particularly related to watermelon cultivation, it improves its Brix and flavor compared to the usual pumpkin rootstocks.
- In the nursery it shows a very fast and uniform germination, short and strong hypocotyl with a similar diameter to the graft, which facilitates speed and operation when grafting. It allows the sowing of the graft and rootstock at the same time.
- In the field: very strong and vigorous root system with good behaviour against Nematodes. It ensures continuous production.
- IR\*/TOL\*: *Fusarium oxysporum*, F.sp. *Niveum*, 1,2.

## Eggplant

### AKX 515 (TROIKA)

- A successful variety that stands out for its vegetative development and its perfect affinity with the grafted variety.
- Plant with very vigorous growth even in low temperature conditions.
- It maintains a large root volume during cultivation, which allows it to maintain root hairs and thus improve the variety's production and quality, reducing and/or eliminating the dreaded loss of black color.
- To be planted in the seedbed about 7 days before the variety is grafted.
- IR\*: Verticillium.

# ROOTSTOCK

## IKER F1

- Vigorous plant that produces homogeneous fruits with high sugar content.
- Short hypocotyl, slow to ripen, and small cotyledons, allowing large-scale handling.
- Good tolerance in high temperatures and dry conditions.
- IR\*/TOL\*: Fusarium, Verticillium and Nematodes.

Lagenaria for watermelon

## PROTECTOR F1

- For open field and protected cultivation.
- Excellent compatibility with the main pepper varieties on the market.
- Very high grafting percentage: robust plants without excess vigor and uniform, quality fruits, with high pulp thickness.
- HR\*/IR\*: PVY, Tm, Pc, Ma, Mi, Mj.

Pepper

## RADIK F1

- It provides extra earliness to grafted watermelons, about one week.
- Very good quality fruit, excellent flavor and texture, without corking problems.
- It allows cultivation under stressful conditions.
- Treated with thermotherapy to avoid infections.
- IR\*: Fom 0,1,2,1.2/Fon 0,1,2/For.

Pumpkin for watermelon

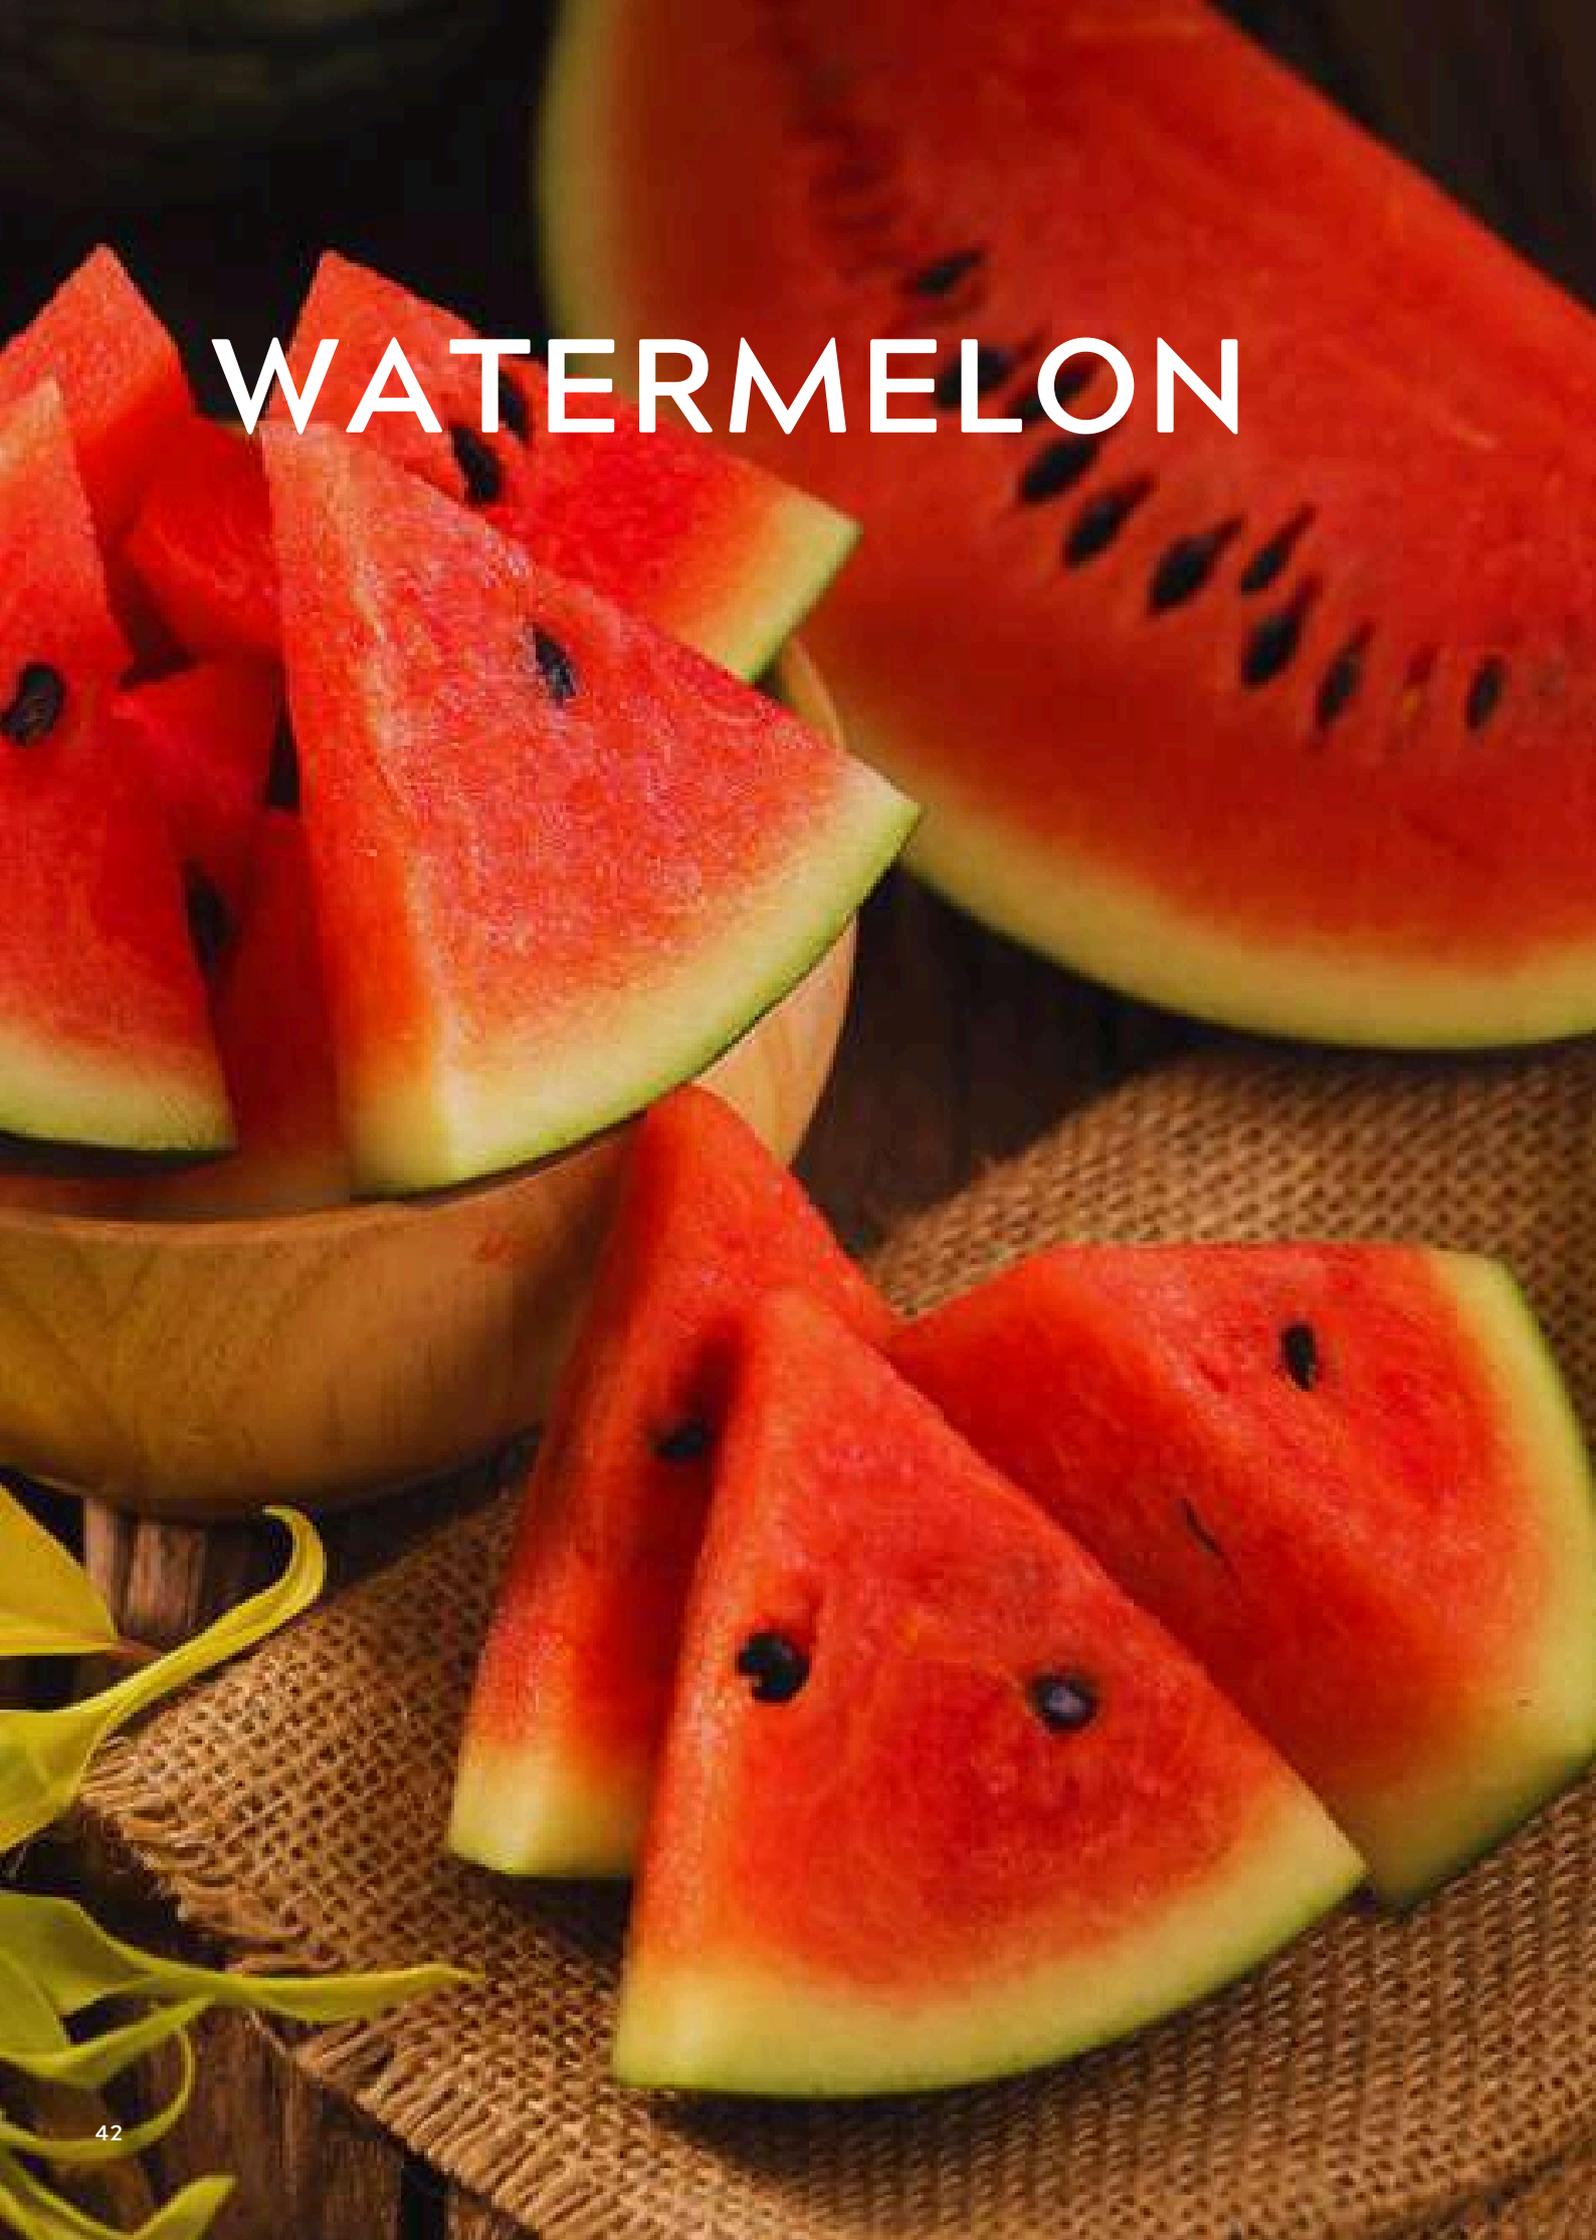

## RS 841 F1

- *Cucurbita maxima* x *Cucurbita moschata* interspecific hybrid with excellent results.
- Extraordinary affinity with all varieties.
- Vigorous plant maintaining its development despite adverse soil or temperature conditions.
- IR\*/TOL\*: Fusarium oxysporum, F. melonis 0,1,2, F.sp. Niveum.

Pumpkin for watermelon

# WATERMELON

A still life photograph of watermelon. In the foreground, several triangular slices of watermelon with red flesh and black seeds are arranged on a piece of light brown burlap fabric. To the left, a wooden bowl is filled with more watermelon slices. In the background, a large, thick slice of watermelon is visible, showing its characteristic red flesh and black seeds. The lighting is soft, highlighting the texture of the watermelon and the burlap.

# WATERMELON, diploid

## Crimson

### AMAZONIA F1

- Round-oval fruits, 8-10 kg weight.
- Vigorous and covering plant.
- Medium bright green skin with large dark green stripes.
- Crunchy flesh with an excellent bright red color.
- Sweet taste, high Brix.
- Mid-early cycle.
- Suitable for open field and protected cultivation.
- IR\* : Fon, Co.

## Crimson

### LA BESTIA F1

- Extra large elongated variety (12-14 kg).
- Smooth skin with wide, medium green stripes.
- Deep red flesh, very firm and sweet.
- Mid-early cycle.
- Vigorous plant with excellent coverage.
- High yield and long shelf life.
- Suitable for open field.
- IR\*: Fon, Co.

## Crimson

### MARBELLA F1

- Mid cycle, outstanding for its quality, high productivity and adaptability to different environmental conditions.
- Elongated, regular and uniform fruits, with an average weight of 10-15 kg depending on the growing period, distance between plants and type of rootstock.
- Deep red, sweet, and crunchy flesh; Brix above 11.5° and excellent resistance to over-ripening.
- IR\*: Fon, Co.

# WATERMELON, diploid

## Crimson

### PRISMATICA F1

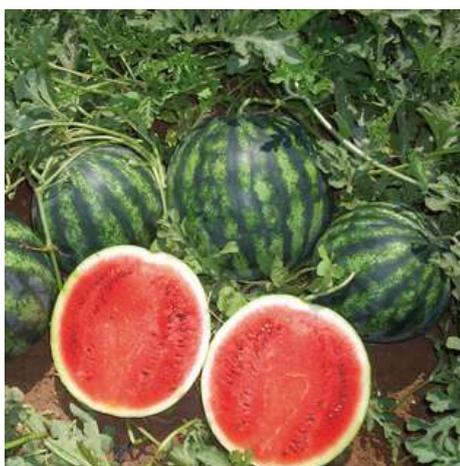

- Oval and very uniform fruits weighing 12 kg on average and even 18-20 kg when grafted.
- Deep red flesh, compact, slightly fibrous and with excellent flavor (12° Brix).
- Mid green skin with well-marked stripes and good thickness, allowing for good transportability.
- Suitable for open field and protected cultivation.
- IR\*: Fon, Co.

## Crimson

### TOP MARA F1

- Round-oval fruits, 10-12 kg weight.
- Vigorous plant, with long leaves providing good coverage.
- Shiny skin with large dark stripes. Excellent thickness and consistency for transport.
- Bright red, sweet and crunchy pulp, with low fibrousness and 12-13° Brix.
- Early cycle. For open field and protected cultivation.
- IR\*: Fon, Co.

## Crimson

### UG 708 F1

- New MIDI hybrid, "Unigen 4Color®" skin.
- 4-6 kg weight depending on plant density and cultivation technique.
- A good alternative for producers who want an attractive and innovative intermediate size.
- Vigorous and covering plant.
- Ideal for protected cultivation and early harvest.
- IR\*: Fon, Co.

# WATERMELON, diploid

## YELLOWIN F1

- Yellow flesh and black seeds.
- Vigorous plant with excellent coverage.
- Early cycle.
- Very uniform, round-oval, sweet fruits (12° Brix).
- Average weight: 3-4 kg.
- IR\*: Fon, Co.

Miyako

## CALIMERO F1

- Very uniform fruits, 4-6 kg weight, with deep dark green skin.
- Bright red, crunchy flesh.
- Exceptional yielder.
- For open field and protected cultivation.
- IR\*: Fon, Co.

Sugar Baby

## MAGIA NEGRA F1

- Early cycle.
- Exceptional size, color uniformity (dark green to black) and productivity.
- Average weight: 7-8 kg.
- Deep red flesh, crunchy and sweet (11° Brix).
- IR\*: Fon, Co.

Sugar Baby

## ROMERIA F1

- Mid cycle.
- Deep red flesh with small black seeds.
- Tremendous yield potential, very strong plant with good cover.
- Average weight: 11-12 kg.
- HR\*/ IR\*: Fon, Co.

Sugar Baby

# WATERMELON, triploid

## Crimson

### MARIANITA F1

- Vigorous, healthy plant with great adaptability to the most diverse growing conditions.
- Perfectly round fruits, 5-7 kg weight.
- Deep red, shiny pulp, crispy and with a very high Brix level.
- Suitable for open field and protected cultivation.
- Early cycle.
- HR\*/IR\*: Fon, Co.

## Crimson

### RAMBLA F1

- Very productive variety, excellent for greenhouse cultivation.
- The thickness of the skin allows for long-distance transport without damage.
- Average weight: 4-6 kg.
- Deep red, sweet and crunchy flesh.
- Pollinator needed (Early Samanta suggested).
- HR\*/IR\*: TMV, TSWV.

## Crimson

### SAPPORITA F1

- Mid vigor plant that guarantees optimal production and good fruit coverage.
- Round, very uniform fruits, 5-7 kg weight.
- Bright red flesh, consistent, very rich in sugars (13-14° Brix).
- Long shelf life.
- Early cycle.
- HR\*/IR\*: Fon, Co.

# WATERMELON, triploid

## Miyako

### RUBY DENSITY F1

- Early cycle, constant production.
- Round-oval, uniform fruits; olive-green skin and dark stripes.
- Average weight: 5-7 kg.
- Bright red flesh, 12° Brix, consistent and crunchy.
- Good storability.
- Suitable for open field and protected cultivation.
- HR\*/IR\*: Fon, Co..

## Miyako

### SINRUBITA F1

- Early cycle.
- Unlike the classic Miyako, the thickness is very good and therefore resists cracking.
- Light green skin with dark green stripes.
- Fruits weighing 4-6 kg, with good-tasting flesh and 12-13° Brix.
- Suitable for open field and protected crop.
- HR\*/IR\*: Fon, Co.

## Sugar Baby

### BLACK DEVIL F1

- Round and unifom fruits, bright black skin.
- Average weight: 8-9 kg.
- Extraordinarily productive.
- Vigorous plant.
- High density flesh, very sweet (12° Brix).
- Recommended for continental and tropical areas.
- HR\*/IR\* : Fon, Co.

# WATERMELON, triploid

## Sugar Baby

### BLACKITA F1

- Very uniform round fruits, 3-4.5 kg weight.
- Shiny black skin and deep red, crunchy flesh with high Brix.
- Optimal variety for transport, tolerant to cracking.
- Mid cycle.
- Suitable for open field and protected cultivation.
- HR\*/IR\*: Fon, Co.

## Sugar Baby

### KOKUMITA F1

- Mini variety, 1.5-2.5 kg weight.
- Early cycle.
- Balanced plant with high yielding potential.
- Adapted to all transplant periods and soil types.
- Shiny black skin. Crunchy red flesh of the highest quality, resistant to overripening.
- IR: Fon, Co.

## Sugar Baby

### UG 2241 F1

- Mid-late cycle.
- Covering and very productive plant.
- Suitable for harvesting in midsummer.
- Round fruits weighing 4-6 kg, with shiny black skin and very compact red flesh.
- Excellent resistance to overripening.
- Caliber adapted to boxes of 4 fruits.
- IR: Fon, Co.
